

Gsorting Installation Manual

About: What can Gsorting do for you?

The main goal of "Gsorting" is to assist users in identifying different types of household waste and provide advice on how to dispose of them appropriately.

The application features two search methods: a text search and a photo scan search. Users can search for waste by entering relevant keywords or by scanning a photo of the waste using the phone's camera. Gsorting then analyzes the pictures and provides users with detailed waste classification and suggestions for disposal.

Android phones complete the installation by downloading the APK

Users just need to scan the following QR code.

Scan ME

Click on the download icon when it appears, click on it, and then when the app's name appears, go ahead and click on install to finish installing Gsorting.
